Title: Regarding crop cutting Report system in Odisha –laid.

SHRI SURESH PUJARI (BARGARH): The method of crop cutting report system in Odisha is totally defective. The identification of location of different Panchayats is done by the State Government on the basis of satellite remote sensing system. This system is okay where there plain land. But in the western part of Odisha, particularly in my Parliamentary Constituency, the land is layer by layer for which this system does not do justice. Apart from that, sometimes it falls on a plot or location where there is Deep Bore Irrigation System as a result of which the crop loss assessed from the crop cutting report is not proper and incorrect Therefore, I request the Hon"ble Minister of Agriculture to call for a report from the State Govt of Odisha, examine it, and direct them to have a better correct assessment system.
